MATH 1800 - Fall 26
Homework 1
Due on 9/7/2026 by 11:59pm as a scanned pdf to Gradescope

1. I appreciate the "not comparing ourselves to others part." I think in school, and particularly with math (a subject so binary) it's easy to want to compare results. I agree with all the norms placed and I cannot think of any other general norms that are necessary for the class.
2. There are two people I knew would be taking this class, and multiple people I know in our class that I didn't know would be present until the first day. I am roommates with Will this year, I was roommates with Lindell last year, Hiro was on my orientation trip, and I do club basketball with Ryder.
3. I want to develop my ability to struggle with problems effectively. Often with math, I struggle to ask for help, which means I don't wrestle with the content enough in practice, which leads to struggling with the content on exam day. I want to learn to challenge myself to ask questions and be transparent with myself and others when I'm struggling with the content
